a) 
$$P_{i}$$
 of metado de Newton - Gregory:

 $P(x) = a_0 + a_1(x - x_0) + a_2(x - x_0)(x - x_0)$  es el polinomio que interpode

al conjunto  $\Omega$  dedo tal que;

 $a_0 = f(x_0)$ ;  $a_1 = \frac{f(x_1) - f(x_0)}{h}$ ;  $a_2 = \frac{f(x_2) - 2f(x_1) + f(x_0)}{2h^2}$ 
 $P(x) = a_0 + a_1x - a_1x_0 + a_2x^2 - a_2x(x_0 + x_1) + a_2x_0 \times 1$ 

b) Alora x doive el polinomio con respecto a x.

 $P'(x) = a_1 + a_2 2x - a_2(x_0 + x_1)$ 

Altors evaluanos en  $x = x_0$ :

 $P'(x) = a_1 + a_2 2x - a_2(x_0 + x_1)$ 
 $P'(x) = a_1 - a_2 h = \frac{f(x_1) - f(x_0)}{h} - \frac{f(x_0) - 2f(x_0) + f(x_0)}{2h^2}$ 
 $P'(x) = \frac{2f(x_1) - 2f(x_0) - f(x_0)}{2h} + \frac{2f(x_0) - 2f(x_0) + 2f(x_0)}{2h}$ 
 $P'(x_0) = \frac{4f(x_0) - 2f(x_0) - f(x_0)}{2h} + \frac{2h^2}{2h^2}$ 

\*Rearder que si  $x_0 = x_0$  and hear

x1=x+h, x=x+2h
